Report Terminology:

- Doc Hit Count:** The number of documents that directly have one or more search hits. In the context of a report with multiple lines of syntax, overlap may occur if a document directly hits on more than one term.
- Family Count:** The total of documents when all family members of direct search hits are also included.
- Uniqueness:** The number of direct document hits where only the current term is hit and no other. If this line of syntax is omitted, at least this number of documents will be removed from the overall search hit count.
- Search Proportion:** The percentage of documents that hit directly on a line of syntax. This is calculated out of the total number of searchable document in the slice.
